icon.snap[™]

Our guidance, our expertise. You in the driving seat.

ICON.snap™ is our revolutionary approach to content-management that puts you in complete control of your site.

Now in its third release, our flagship product was built from the ground up by our software team giving us full control over code and functionality. ICON.snapTM has the tools to produce great results and deliver a unique user experience: your experience.

Reliable. Quick. Easy.

There's no need to refer to us to make routine, daily updates to your site. With ICON. snap™ you can make all the changes you need in the comfort of your office, which translates immediately into time and money savings.

• User-friendly: A snap to use!

One of the best things about ICON.snap™ is that it's user-friendly and, while staff training is included, chances are you won't need it. It feels familiar.

• Powerful: Use it

ICON.snap™ is feature rich, allowing you to keep your content updated at the touch of a button. Control the date and time when information goes live, use templates to create professional, interesting pages which still match the style of your site, and manage your search engine ranking through the control of meta tags, content, menu structure and so on.

• Modular: Tailored, Customisable and Unique to You

We recognise that our clients' needs are all different so why should you pay for features you don't need? ICON.snap TM allows you to select the modules that are right for you and your business. Plus, if you need something particular, we can develop it just for you.

ICON.snap™ is built using the latest incarnation of the .NET framework. Apart from reliability and scalability, this means that we can integrate with almost any existing internal application you may have or customise ICON.snap™ to your particular requirements quickly and affordably.
